

MORTAR PROCESSING SYSTEM MASONRY OF CERAMIC INNER WALL BRICKS/BLOCKS

INFO FLYER

Gema©k

THE IDEAL
COMBINATION

The Gema©k Mortar Processing System used for exterior walls is also very good for interior walls made of Poriso, Porotherm and other similar inner wall bricks/blocks.

Using standard glue or thin bed mortar for outer walls, where the joints can be just 3 to 8 mm thick, also makes it possible to use standard unfinished masonry blocks.

These glue and thin bed mortars let you effortlessly allow for the dimensional tolerances of the bricks/blocks.

If the mortar is well mixed in the Gema©k Mixing Tap and applied in doses with the Mortar Gun, losses due to spillage are no longer an issue.

The Gema©k Mortar Processing System gives a productivity benefit of up to 30% compared to traditional masonry. In addition, the quality is greatly improved because the mortars' adhesive strength is 2 to 3 times higher than traditional masonry mortars.

SO MAKE THE MOST OF IT AND CHOOSE
THE CONVENIENCE OF GEMA©K!
