

MORTAR PROCESSING SYSTEM MIXING AND FILLING JOINTS WITH 'WET' GROUT

INFO FLYER

Gema©k

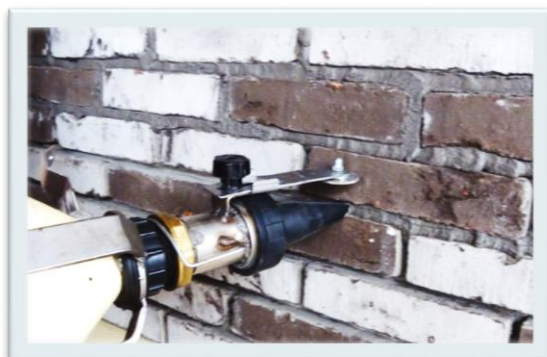

THE IDEAL COMBINATION

Gema©k Mortar Processing System can also be used for grouting joints and seams! An alternative for pointing with a traditional 'dry' grout is to filling joints quickly and mechanically with 'wet' grouting mortar. This improves the quality of the pointing in brick facing strips on insulation for wall renovations by up to 25%! Mix the 'wet' grout perfectly in the Gema©k Mortar Mixing Tap. The grouting cement is dosed easily and quickly using the Gema©k Mortar Gun. There are two basic mouthpieces available with various interchangeable nozzles.

Also good for repairing, renovating or repointing wall façades!

Depending on how the mortar hardens, it can then be finished with a:
point master (smooth recessed pointing),
thin pointing trowel (smooth)
or pointed trowel (scraped 'rough' pointing).
With Gema©k:
Faster and better filling, better adhesion,
better quality

**SO MAKE THE MOST OF IT AND CHOOSE
THE CONVENIENCE OF GEMA©K!**
